Turn project management
chaos into harmony

The Chaos Theory Study

In 2014, Projectplace commissioned an **independent research study** that looked at the views and attitudes of people who manage projects on a regular basis.

It was conducted as part of a collaborative effort by Loudhouse, an independent research agency based in London, and Cint, a global platform and technology firm dedicated to creating self-service solutions for online market research.

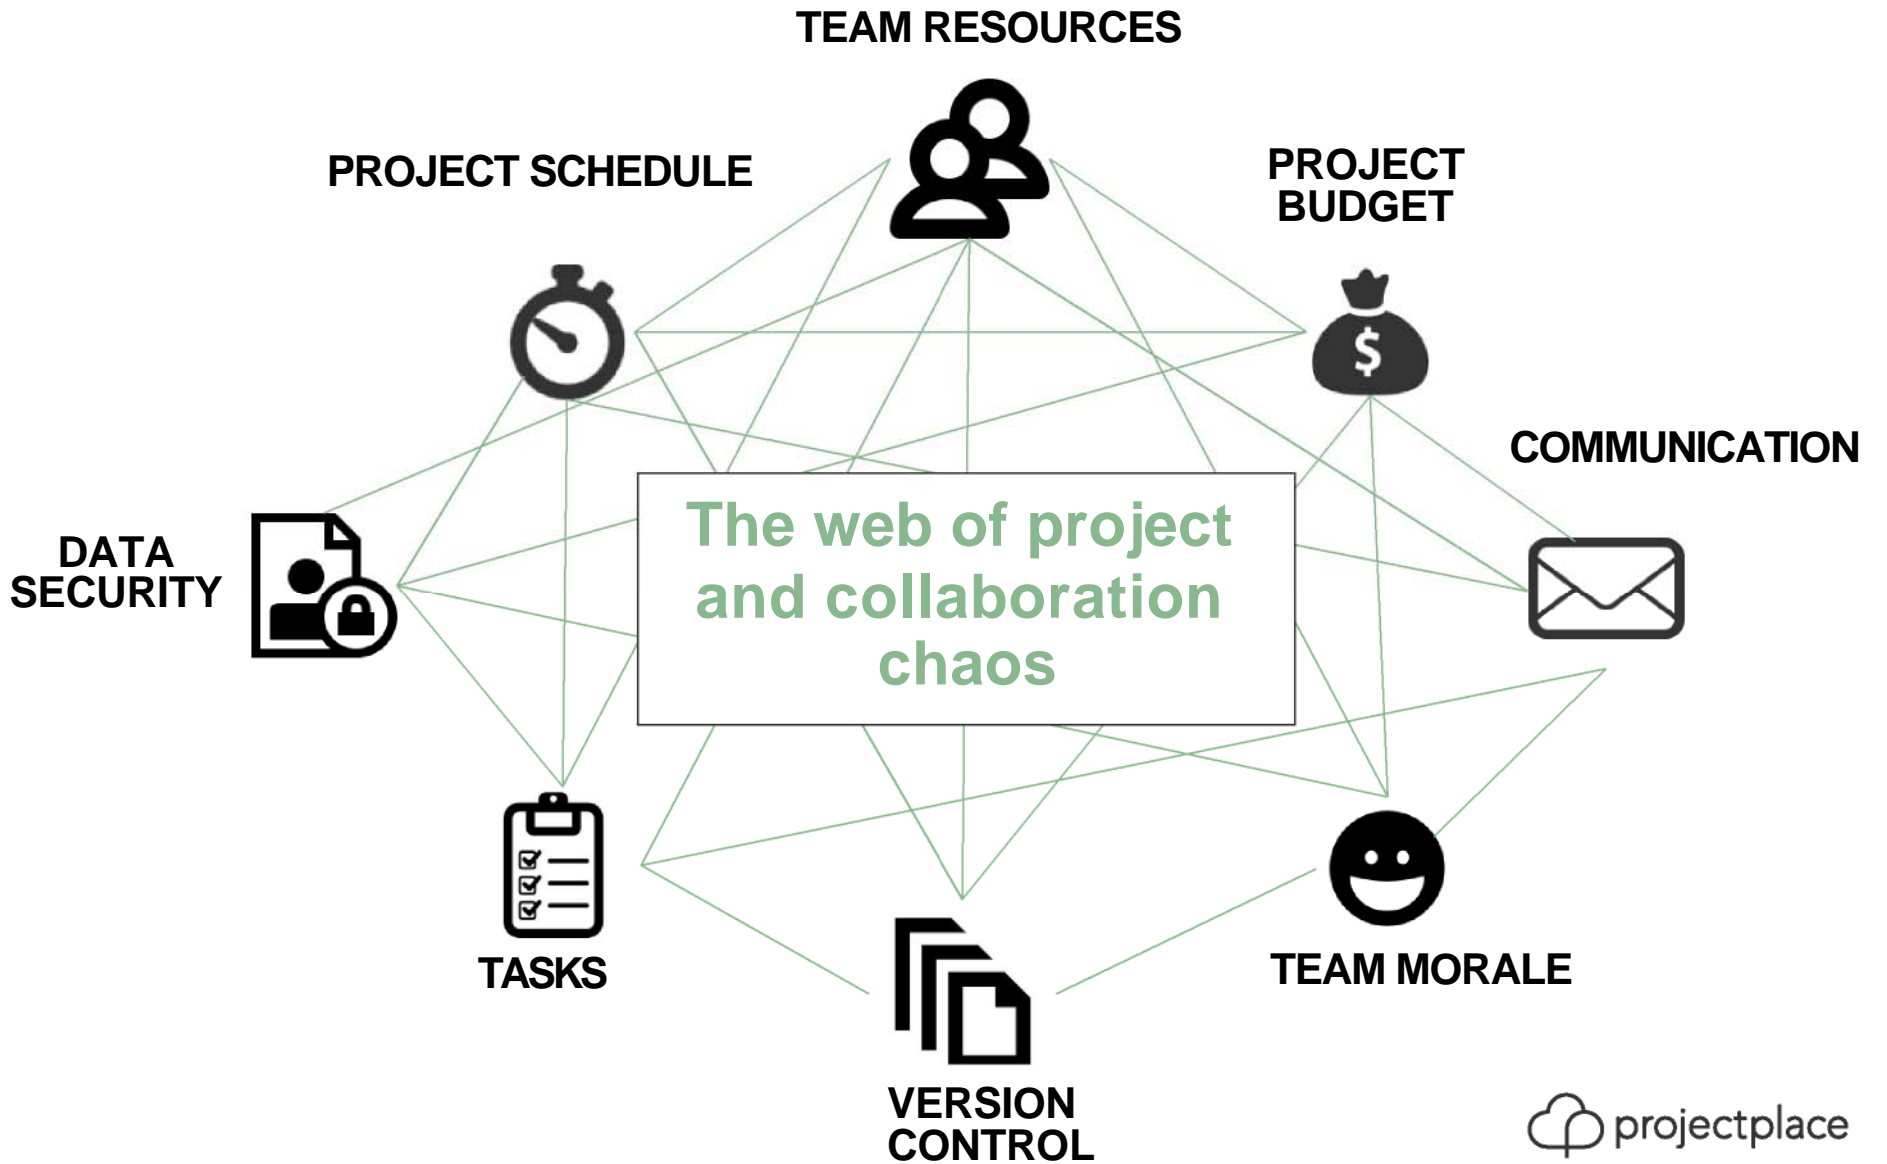

1,240 people who manage projects participated:

Sweden Norway Denmark UK Germany Netherlands

202 208 206 217 203 204

Project managers are under huge pressure

They need to adapt to...

- › The growing role of technology in organizations
- › The increasingly global nature of business
- › Customers' evolving expectations

Chaos Theory research reveals...

- > Project managers waste up to 20 working days a year due to inefficiency:
 - > Lost or missing information
 - > Incorrect or lack of communication
 - > Lack of knowledge
 - > No standardized processes
- > They work on their days off >
- Deadlines slip
- > Budgets go out the window

All of this leads to **stress**.

79% say that maintaining a work-life balance is very important to them

How much time do you think
you waste each week?

The cost of chaos

2h 45m

a week are wasted due to inefficient practices

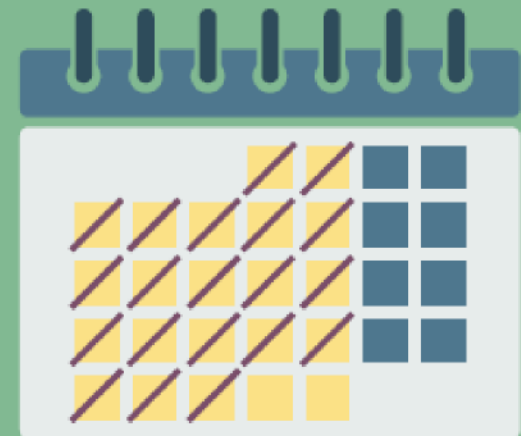

20 days

that's how long it equates to in a year

8%

is how much it approximately costs businesses in project managers' time and salary

The chaos is real

Half (50%) are taking on tasks outside their main role

Over half (58%) say that their employer expects more from them every year

One in five projects (19%) runs late

People who manage projects waste an average of 2 hours and 45 minutes a week

Half (48%) say their personal life is often affected by the stress created from work

Does technology cause problems...?

- > 64% of project managers can access sensitive data in their organization
- > ...Yet only half (54%) can easily see who has read, changed or downloaded a shared document
- > Over a third (**35%**) say the number of emails they receive at work often makes them feel stressed
- > **31%** say it is becoming harder to know which communication method to use day-to-day

..or does technology help?

- › True mobility enables you to access real-time data
- › Teams, management and stakeholders get **intelligence on demand**
- › 74% of project managers say new tools will lead to fewer project delays
- › 69% say new tools help them control costs better

...If your data is safe, the benefits of technology are undeniable

Project Collaboration – overcome communication chaos

> 37% of project managers say lack of communication is a major obstacle to collaboration

> Email – still top communication method

Project Collaboration allows you to...

- > Communicate, collaborate and follow-up
- > Work from different locations on any device
- > Get a better information flow
- > Give project managers the control they need
- > Transparency
